Design Technology

Design a mechanism like a 'shaduf' to transport water from one area to another. See the PowerPoint for an idea!

Design Criteria:
- Structure must stand on its own
- Must be able to move water from one place to another

My Design

Resources

Evaluation- did your design go according to plan? Did it meet all of the design criteria? What could be improved? (Support for evaluation on PowerPoint)

Photo of your creation (if you can) or send me picture of your mechanism
